

If you have upgraded your platform, but cannot find your layout files and other settings, **print this document** and follow the instructions to find them.

1. Be certain your trading platform is closed.
2. If on Windows XP operating system, go to **Start – My Computer**. If on Windows 98, go to your Desktop and double click on **My Computer**.
3. Double click the **C drive – Program Files** folder – **IQin** folder.
4. Find the file titled **savelay.bat**. (Your computer may only list the file name as **savelay**.) Double click on it.
5. A black screen will appear and scroll through several lines of text for about 8 seconds. Once the black screen disappears, go to the **Layout** folder and double click on it. Right mouse click on the **Lay.arq** file and select Copy.
6. Hit the Back button on your explorer screen twice until you are at C:/Program Files.
7. Double click the **IQuote32** folder.
8. From the menu screen select **Edit - Paste**.
9. Scroll down in that same folder and double click on the **loadlay.bat** file. (Your computer may only list the file name as **loadlay**.) Another black screen will appear and scroll through. Every time it pauses, press the “**a**” key on your keyboard.
10. Once that stops and the window disappears, close your explorer window and start the trading application. Go to **File – Open Existing Layout** and you should see your layouts there. If not, please contact us at 1.800.327.1883.
